

Animal Teeth

Teeth are bones that help animals eat food. Teeth come in all sizes and shapes!

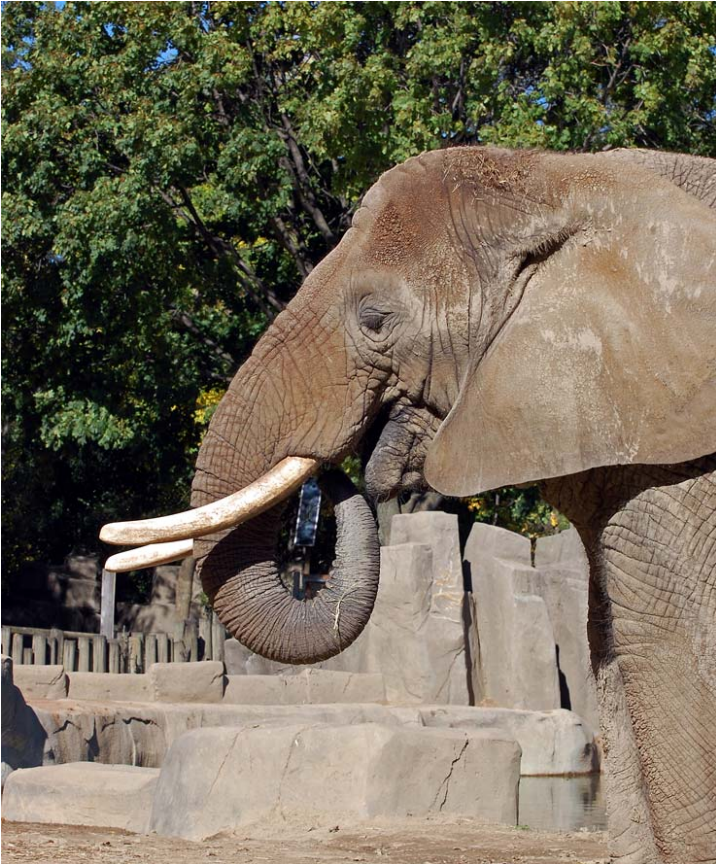

Alligators have sharp teeth to catch food like fish, snakes and deer.

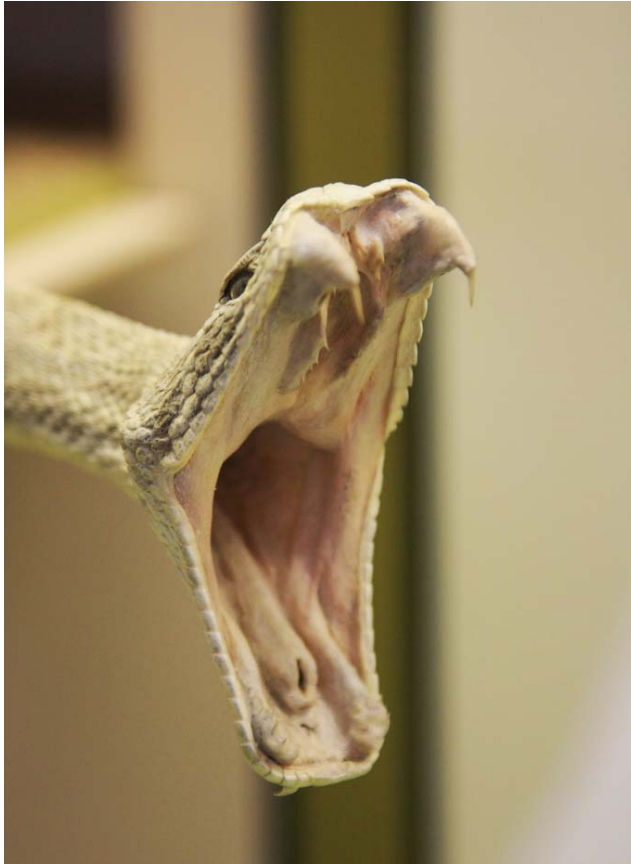

Cows and horses have flat teeth to chew grass and other plants.

Bears have both sharp and flat teeth to help them eat meat and plants.

Elephants have long tusks, which are a kind of teeth. They use their tusks to dig and carry big things.

You don't want to mess with this snake! It has poison inside its teeth that can kill a small animal.

We have teeth too. Our sharp front teeth help us grab and cut food and our flat back teeth chew food into small bits.

Too bad animals don't have a tooth fairy like we do when their teeth fall out!

The Mustard Seed Books project uses an open-source, Wikipedia-type strategy, leveraging public expertise to create and refine a set of high-quality books that support early reading development. All of the books and pictures are covered by the Creative Commons License (<http://creativecommons.org/licenses/by-nc-sa/3.0/>) and are free to print, distribute, and modify for personal or educational use. The books are available at www.mustardseedbooks.org. New titles appear on a regular basis. If you have any ideas for books or would like to leave us any feedback, contact rick@mustardseedbooks.org .

Photos for these books come primarily from Flickr (www.flickr.com) and the Morgue File (www.morguefile.com). Both sites are great resources for high-quality publicly accessible photos and for aspiring photographers looking to share their work. All photographs are covered by the Creative Commons License (<http://creativecommons.org/licenses/by-nc-sa/3.0/>).
