

Sunflowers

Have you ever
eaten a sunflower
seed?

Did you know
you are eating
part of a flower?

Growing a sunflower starts with seeds that are planted in the ground.

The seed will begin to sprout into a little plant called a **seedling**.

With lots of water and sunlight the seedling will grow and grow.

Soon, a **bud** grows on the little plant. A bud is where the flower will grow. As the bud gets bigger, it's getting ready for the flower to open.

Finally, the flower opens up. This is called **blooming**. The middle of the flower is where the seeds start to grow.

Behind each little yellow part of the flower, a sunflower seed is growing.

A giant sunflower can grow to over 12 feet tall.

A sunflower can have up to 2,000 seeds.

How many seeds do you see in this picture?

You can collect the seeds to grow more sunflowers or the seeds can be a yummy snack for you or a friend!

The Mustard Seed Books project uses an open-source, Wikipedia-type strategy, leveraging public expertise to create and refine a set of high-quality books that support early reading development. All of the books and pictures are covered by the Creative Commons License (<http://creativecommons.org/licenses/by-nc-sa/3.0/>) and are free to print, distribute, and modify for personal or educational use. The books are available at www.mustardseedbooks.org. New titles appear on a regular basis. If you have any ideas for books or would like to leave us any feedback, contact rick@mustardseedbooks.org .

Photos for these books come primarily from Flickr (www.flickr.com) and the Morgue File (www.morguefile.com). Both sites are great resources for high-quality publicly accessible photos and for aspiring photographers looking to share their work. All photographs are covered by the Creative Commons License (<http://creativecommons.org/licenses/by-nc-sa/3.0/>).
